

KNOW WHAT THE BUILDING SHOULD BE. KNOW WHO TO CALL.

Upload the OM. TenantScout reads the text and the photos, works out the highest and best use, and hands you the businesses that fit it, the day you sign.

HOW THE ENGINE SCREENS EVERY USE

1

Allowed here?

Zoning district checked against the jurisdiction's permitted-use code.

2

Physically possible?

Clear height, doors, power, yard, office ratio, parking, frontage.

3

What would it take?

Plug-and-play ranks ahead of a heavy build-out.

4

Who wants it?

Size fit and submarket demand.

WHAT YOU WALK AWAY WITH

- **The top three uses**, each with a fit score, conviction and the reasoning
- **A call sheet per use**: phone, address, website where listed, distance, talking points, DNC scrub
- **An override** when you know better, and the list rebuilds around your call
- **Leads in the CRM** and follow-ups from every call outcome

THE TENANT

A space that fits their business, legally and physically, and a call that's about them.

YOU

First conversations the day you sign, and a real shot at your own tenant on your own listing.

THE OWNER

A clear answer to "what should this be?" with names attached, before the sign goes up.

BRING YOUR NEXT LISTING. WE'LL RUN IT WITH YOU. [TENANTSCOUT.AI](https://tenantscout.ai)

THE SAME HBU DISCIPLINE ON EVERY LISTING THE FIRM SIGNS.

WHAT IT IS

TenantScout is an HBU engine for commercial listings. From an offering memorandum it ranks the highest and best uses of the building (legal, physical, conversion cost and demand), explains the reasoning, and builds a call list of the businesses that fit each use.

WHAT IT CHANGES FOR THE FIRM

Consistent analysis

Every broker, every office, the same screening on day one.

Stronger pitches

Brokers walk into the listing presentation with the answer and the names behind it.

Faster leasing

Conversations start the day the listing signs.

More double-ends

The firm's broker finds the tenant for the firm's listing.

Value owners see

A plan with names attached, and work the owner can watch happen.

A record you keep

Leads, call outcomes and follow-ups live in a shared CRM.

What it doesn't do

It doesn't replace the broker's judgment. Every ranking comes with its reasoning, and any broker can override it.

On your data

Uploaded OMs are used to produce your outputs, processed by named service providers under contract. We do not sell personal information.

WHAT HAPPENS WHEN EVERY LISTING STARTS WITH A RANKED ANSWER AND A CALL SHEET?

FROM THE OM TO THE FIRST CALL.

01

UPLOAD

The OM or flyer. Text, photos, floor and site plans are all read.

02

SCREEN

Every use tested for zoning, physical fit, conversion cost and demand.

03

RANK

Top three uses with fit score, conviction and reasoning. Override any of them.

04

CALL

The businesses that fit each use, with a reason to call each one.

05

FOLLOW UP

Leads seed the CRM, tasks come from call outcomes, renewal radar watches the tenants you place.

THE ENGINE, IN PLAIN WORDS

- A use the zoning prohibits never makes the list, so it never reaches a phone call.
- Hard physical requirements knock a use out before it's scored.
- Ready-to-occupy uses rank ahead of ones that need a big build-out.
- Size fit and submarket demand decide the order.
- Investment listings branch to buyer matching instead.

YOUR JUDGMENT DRIVES IT

Read the reasoning behind every ranked use. When you know the building better, override it, and the call list rebuilds around your call.

**THE ENGINE DOES THE SCREENING.
YOU MAKE THE CALL.**

ONE LISTING, START TO FINISH.

ILLUSTRATIVE EXAMPLE · NOT LIVE MARKET DATA · BUSINESS TYPES ARE DESCRIPTIONS, NOT REAL COMPANIES

The listing

Single-tenant industrial building on a light-industrial parcel. Secured paved yard, grade-level doors, modest office.

RANKED USES

#	USE	WHY IT RANKS	CONVERSION
1	Contractor / equipment yard	Secured yard, industrial zoning	PLUG-AND-PLAY
2	Auto / fleet repair & service	Grade doors; permitted in the district	PLUG-AND-PLAY
3	Light manufacturing	Zoning and power support it	VALUE-ADD

CALL SHEET · USE 1 (EXCERPT)

BUSINESS TYPE	DISTANCE	TALKING POINT
Regional HVAC contractor	Under a mile	Secured yard for vehicles and equipment, close to their service area
Equipment rental branch	A few miles	Grade doors and a paved yard suit a rental counter and storage
Landscape contractor	A few miles	Room for trucks and materials without leaving the area

CALL, LOG THE OUTCOME, AND THE FOLLOW-UP SCHEDULES ITSELF.

PROVE IT ON REAL LISTINGS.

No platform decision from a deck. A few brokers, a few listings, and a review together.

THE SHAPE

- A focused group of leasing brokers
- Real listings, current and newly signed
- Onboarding and a direct line to the founder
- A set review date

WHAT WE LOOK AT TOGETHER

- Did the ranked uses hold up against the brokers' own read?
- Did it change the listing pitch?
- How fast did the first real conversations start?
- Did brokers keep using it without being asked?

Commercial terms

Set together once the scope is agreed.

PICK THE BROKERS. PICK THE LISTINGS. RUN IT.

TENANTSCOUT.AI

BIGGER THAN SOFTWARE ACCESS.

POSSIBLE PATHS

Firm-wide adoption

TenantScout across an agreed group or business line.

Design partner

Your brokers help shape the engine: the uses it knows, the submarkets it understands.

Market intelligence

Your market knowledge plus the engine's screening.

Preferred platform

A deeper technology relationship where the fit is real.

Strategic partnership or investment

Only where incentives and vision line up for both sides.

HOW WE'D WORK

- Broker-first
- Firm and client information protected
- Proven on real listings before anything scales
- Incentives aligned before scope grows

TO TALK THROUGH

- Which listings or teams would show the engine best?
- What would the firm need to see to go wider?
- What would make this worth more than a vendor contract?
